*Generative AI for Social Media Marketing*

C1468 | | 2 days / 15 hours | v1.0 | 13 Sep 2026

Tertiary Infotech Academy Pte Ltd • UEN 201200696W

## Document Version Control Record

| Version    | Date          | Material change                                                  | Owner             |
|------------|---------------|------------------------------------------------------------------|-------------------|
| Legacy v10 | Prior release | Instagram-focused source deck; retained as reference             | Tertiary Infotech |
| v0.9       | 13 Sep 2026   | First AI social marketing rebuild with 205 slides and eight labs | Tertiary Infotech |
| v1.0       | 13 Sep 2026   | Rebuild: admin visuals and document navigation                   | Tertiary Infotech |

## Table of Contents

Course identity and outcomes • delivery topics • detailed lab workflow • references

## Course identity and outcomes

Official course page: <https://www.tertiarycourses.com.sg/generative-ai-for-social-media-marketing.html>

- LO1: Develop a plan and objectives for a social marketing campaign
- LO2: Evaluate opportunities and the feasibility of social media platforms
- LO3: Create a generative AI social media campaign and monitor its outcome
- LO4: Evaluate AI campaign use and organisational impact

## Delivery schedule

| Block                        | Content                                              | Outcome | Evidence                                              |
|------------------------------|------------------------------------------------------|---------|-------------------------------------------------------|
| <b>Day 1 AM • 3 h 45 min</b> | Topic 1 • slides 4–53 • Labs 01–02                   | LO1     | Campaign brief, audience and objective evidence       |
| <b>Day 1 PM • 3 h 45 min</b> | Topic 2 • slides 54–103 • Labs 03–04                 | LO2     | Platform feasibility and pilot decision               |
| <b>Day 2 AM • 3 h 45 min</b> | Topic 3 • slides 104–153 • Labs 05–06                | LO3     | Approved creative variants, ad structure and calendar |
| <b>Day 2 PM • 3 h 45 min</b> | Topic 4 • slides 154–203 • Labs 07–08; close 204–205 | LO3–LO4 | Tracking, diagnostics and organisational impact       |

## Facilitation and checks

01 Campaign objective and KPI tree: demonstrate SMART brief and KPI owner; ask learners to justify “Choose lead volume only with quality guardrail”; check risk: Vanity engagement masks low-intent traffic.

02 Audience evidence and consent: demonstrate evidence-backed audience segment; ask learners to justify “Reject personas without a source and confidence tag”; check risk: Inferred sensitive traits can breach trust.

03 Customer journey mapping: demonstrate journey-to-content matrix; ask learners to justify “Every stage needs a testable next action”; check risk: A single post cannot serve every intent.

04 Competitive content audit: demonstrate gap and differentiation map; ask learners to justify “Adapt the unmet need, not the competitor wording”; check risk: Copying creative weakens differentiation.

05 Campaign brief and brand voice: demonstrate approved creative brief; ask learners to justify “Approve only claims supported by source facts”; check risk: AI may invent benefits and testimonials.

- 06 Content pillar allocation: demonstrate four-week pillar mix; ask learners to justify “Rebalance when a pillar misses its intended KPI”; check risk: Posting volume is not a strategy.
- 07 Prompt specification: demonstrate repeatable prompt template; ask learners to justify “Keep facts and output schema explicit”; check risk: Vague prompts produce generic copy.
- 08 Source-grounded claim review: demonstrate claim-to-source register; ask learners to justify “Hold unverified comparative or health claims”; check risk: Confident output is not proof.
- 09 Community advocate plan: demonstrate advocate engagement plan; ask learners to justify “Use consented stories with attribution”; check risk: Incentives can distort authentic reviews.
- 10 Campaign economics: demonstrate budget guardrail sheet; ask learners to justify “Stop spend above allowable CPA after sufficient evidence”; check risk: ROAS alone ignores margin and fulfillment.
- 11 Platform feasibility scoring: demonstrate platform selection matrix; ask learners to justify “Pilot only channels above threshold and with owner”; check risk: Popularity is not audience fit.
- 12 Instagram format choice: demonstrate format-to-CTA map; ask learners to justify “Use motion where demonstration adds evidence”; check risk: Old IGTV guidance is obsolete.
- 13 Facebook and Instagram roles: demonstrate cross-placement plan; ask learners to justify “Keep creative adapted to placement context”; check risk: Duplicated creative may crop or underperform.
- 14 LinkedIn B2B feasibility: demonstrate B2B pilot rationale; ask learners to justify “Test only when deal economics support cost”; check risk: Broad consumer hooks may misfit B2B.
- 15 TikTok short-video feasibility: demonstrate video pilot decision; ask learners to justify “Require native-format proof before budget scale”; check risk: Trend imitation can weaken brand fit.
- 16 Audience overlap and exclusions: demonstrate channel reach plan; ask learners to justify “Prioritize incremental reach over raw impressions”; check risk: Overlap inflates apparent scale.
- 17 Local market relevance: demonstrate localization QA sheet; ask learners to justify “Reject unsupported local stereotypes”; check risk: Literal translation misses local context.
- 18 Opportunity sizing: demonstrate funnel estimate; ask learners to justify “Revise assumptions after pilot evidence”; check risk: AI estimates can appear more precise than data.

19 Platform privacy fit: demonstrate privacy-aware platform decision; ask learners to justify “Avoid activating unconsented personal data”; check risk: Ad targeting can expose private information.

20 Pilot test design: demonstrate channel pilot plan; ask learners to justify “Scale only after threshold and sample check”; check risk: Multiple changes erase causal learning.

21 AI-assisted caption writing: demonstrate caption shortlist; ask learners to justify “Human reviewer checks every fact and tone”; check risk: Invented urgency erodes trust.

22 Hashtag and location strategy: demonstrate tag and location plan; ask learners to justify “Keep only tags tied to intent and geography”; check risk: High-volume tags can attract wrong audience.

23 AI image brief: demonstrate image generation brief; ask learners to justify “Review hands, product fidelity and disclosure need”; check risk: Generated products may misrepresent reality.

24 Short-video storyboard: demonstrate shot-by-shot storyboard; ask learners to justify “Cut scenes that do not advance message”; check risk: Motion without proof produces weak retention.

25 Creative variant matrix: demonstrate six-cell test matrix; ask learners to justify “Test one causal variable per comparison”; check risk: Confounded variants hide what worked.

26 Ad campaign hierarchy: demonstrate editable hierarchy diagram; ask learners to justify “Audit settings at each level before release”; check risk: Wrong objective optimizes the wrong event.

27 Budget and schedule controls: demonstrate flight and pacing plan; ask learners to justify “Pause when spend exceeds guardrail without signals”; check risk: Automation can overspend poor creative.

28 Content calendar orchestration: demonstrate calendar and status board; ask learners to justify “Publish only approved versions”; check risk: Auto-scheduling can propagate errors.

29 UGC rights workflow: demonstrate rights and approval register; ask learners to justify “Archive proof of permission and expiry”; check risk: Public visibility does not grant reuse rights.

30 Community response triage: demonstrate response decision tree; ask learners to justify “Human handles safety, legal and personal issues”; check risk: Bot replies can disclose account data.

31 Tracking event map: demonstrate event and UTM schema; ask learners to justify “Validate event firing with test conversion”; check risk: Pixel fires without consent or wrong event.

32 Metric hierarchy: demonstrate KPI dashboard model; ask learners to justify “Judge campaign on objective metric”; check risk: Likes cannot prove commercial impact.

33 CTR and CPC diagnosis: demonstrate creative efficiency report; ask learners to justify “Refresh hook when CTR falls with stable reach”; check risk: Low CPC can still bring poor leads.

34 CPA and ROAS diagnosis: demonstrate unit economics table; ask learners to justify “Compare with margin-adjusted break-even”; check risk: Attribution may omit offline sales.

35 Frequency and fatigue: demonstrate fatigue alert; ask learners to justify “Rotate creative when frequency rises and CTR falls”; check risk: More impressions may mean saturation.

36 A/B test interpretation: demonstrate test decision memo; ask learners to justify “Do not crown a winner on tiny samples”; check risk: Peeking can create false confidence.

37 AI-assisted report narrative: demonstrate reviewed weekly insight memo; ask learners to justify “Every statement must trace to data cell”; check risk: AI can invent causality from correlation.

38 Retargeting eligibility: demonstrate retargeting policy; ask learners to justify “Exclude converters and honor consent changes”; check risk: Persistent targeting can feel intrusive.

39 Budget reallocation: demonstrate reallocation decision; ask learners to justify “Reserve a test budget and cap downside”; check risk: Optimizing solely to ROAS may starve discovery.

40 Organisational impact review: demonstrate impact scorecard; ask learners to justify “Adopt only with measured quality and governance”; check risk: Speed gains can hide review burden.
